RANGER Floor System

Patent No. 5563077

The Ranger Floor System is a unique galvanized steel and reinforced concrete floor that has been field tested and rated by qualified engineering companies. The true life expectancy of the components were evaluated and were conservatively estimated to exceed 100 years. It is better than wood structural floor systems because it offers the following benefits:

- ▲ Power venting is not required.
- ▲ Insulation is not required.
- ▲ Floors are not cold.
- ▲ Foundation wall heights can be lower.
- ▲ Provides lateral strength for foundation walls.
- ▲ Soil odors are substantially reduced.
- ▲ Wood rotting and mold are not a problem.
- ▲ Installed for new construction or for retrofit.

For additional information, or to observe an actual installation of the Ranger Floor System, please call.
